Combination of Checkweigher and Metal Detector

Product Introduction

This combined checkweigher and metal detector integrates dual systems for weight inspection and metal detection. It enables simultaneous product quality control and metal contaminant detection, effectively reducing the total cost of ownership compared to using separate dynamic checkweighers and metal detectors.

With an optimized structure that shares key components, the device features a more compact overall layout. It significantly reduces the installation space required on production lines, as opposed to deploying two standalone units.

For detailed specifications of the equipment, please refer to the separate brochures for the checkweigher and metal detector, or consult our sales team for further information!
